

**Marking Scheme**  
**Strictly Confidential**  
**(For Internal and Restricted use only)**  
**Senior School Certificate Examination, 2025**  
**SUBJECT NAME PHYSICS (PAPER CODE 55/4/3)**

**General Instructions: -**

<b>1</b>	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
<b>2</b>	<b>"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc may invite action under various rules of the Board and IPC."</b>
<b>3</b>	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.
<b>4</b>	The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
<b>5</b>	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
<b>6</b>	Evaluators will mark( ✓ ) wherever answer is correct. For wrong answer CROSS 'X" be marked. Evaluators will not put right (✓) while evaluating which gives an impression that answer is correct and no marks are awarded. <b>This is most common mistake which evaluators are committing.</b>
<b>7</b>	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.
<b>8</b>	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
<b>9</b>	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note " <b>Extra Question</b> ".
<b>10</b>	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
<b>11</b>	A full scale of marks <u>70</u> (example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer

**MARKING SCHEME: PHYSICS(042)**

	deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	Ensure that you do not make the following common types of errors committed by the Examiner in the past:- <ul style="list-style-type: none"><li>• Leaving answer or part thereof unassessed in an answer book.</li><li>• Giving more marks for an answer than assigned to it.</li><li>• Wrong totaling of marks awarded on an answer.</li><li>• Wrong transfer of marks from the inside pages of the answer book to the title page.</li><li>• Wrong question wise totaling on the title page.</li><li>• Wrong totaling of marks of the two columns on the title page.</li><li>• Wrong grand total.</li><li>• Marks in words and figures not tallying/not same.</li><li>• Wrong transfer of marks from the answer book to online award list.</li><li>• Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.)</li><li>• Half or a part of answer marked correct and the rest as wrong, but no marks awarded.</li></ul>
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the " <b>Guidelines for spot Evaluation</b> " before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

Q.No.	VALUE POINTS/EXPECTED ANSWERS	Marks	Total Marks
<b>SECTION A</b>			
1.	(A) $\tan^{-1} \frac{4\pi\epsilon_0 Er^2}{Q}$	1	1
2.	(A) $R_A > R_B > R_C$	1	1
3.	(D) Negative Z axis	1	1
4.	(C) $60^\circ$	1	1
5.	(D) Copper	1	1
6.	(B) 1.0 A	1	1
7.	(C) $1.8 \times 10^5 \text{Vm}^{-1}$	1	1
8.	(C) Concentric horizontal circles around the wire	1	1
9.	(B) Concave and real	1	1
10.	(C) Photons of light and electrons both exhibit dual nature	1	1
11.	(B) The red beam has more numbers of photons than the blue beam	1	1
12.	(A) Sn	1	1
13.	(C) Assertion is true, but Reason (R) is false.	1	1
14.	(B) Both Assertion (A) and Reason (R) are true but (R) is not the correct explanation of the Assertion (A)	1	1
15.	(A) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of the Assertion (A)	1	1
16.	(A) Both Assertion (A) and Reason (R) are true and (R) is the correct explanation of the Assertion (A)	1	1
<b>SECTION-B</b>			
17.	(a) <ul style="list-style-type: none"> <li>(i) Identifying the type of dopant</li> <li>(ii) Identifying the type of extrinsic semiconductor</li> <li>(b) Calculating the electron concentration</li> </ul>	1 $\frac{1}{2}$ $\frac{1}{2}$

(i)

- Showing consistency of Gauss's theorem with Coulomb's law 1
- Derivation for electric field due to uniformly charged thin spherical shell at (I)  $y > r$  (II)  $y < r$  2

(ii) Finding type and magnitude of charge. 2

(i)

- Gauss's theorem is based on the inverse square dependence on distance contained in the coulomb's law.

**Alternatively-**

According to Gauss's theorem

1

$$\oint \vec{E} \cdot d\vec{s} = \frac{q}{\epsilon_0}$$

$$E = \frac{1}{4\pi\epsilon_0} \frac{q}{r^2}$$

½

According to Coulomb's law, force on charge  $q_0$  in this field

$$F = \frac{1}{4\pi\epsilon_0} \frac{qq_0}{r^2}$$

½

Therefore, Gauss's law is consistent with Coulomb's law

- (I) For  $y > r$

Electric flux through Gaussian surface  $E \times 4\pi y^2$ The charge enclosed by the surface  $\sigma \times 4\pi r^2$ 

Using Gauss theorem

$$E(4\pi y^2) = \frac{\sigma 4\pi r^2}{\epsilon_0}$$

$$E = \frac{q}{4\pi\epsilon_0 y^2} \hat{r}$$

½

½

(II) For  $y < r$

(i)

The charge enclosed by Gaussian surface = 0

Using Gauss theorem

$$\text{Electric flux} = E(4\pi y^2) = 0$$

$$\text{i.e. } E = 0 \quad (y < r)$$

½

½

(ii)

Let the charge is kept at A be q

Potential at point B due to charge at the origin O and charge (q) at A

$$V = V_1 + V_2$$

$$V = \frac{1}{4\pi\epsilon_0} \left[ \frac{2 \times 10^{-9}}{2} + \frac{q}{6+2} \right]$$

½

$$\frac{1}{4\pi\epsilon_0} \left[ 10^{-9} + \frac{q}{8} \right] = 0$$

½

$$q = -8 \times 10^{-9} \text{ C}$$

(a)

(i)

- Statement of Lenz's law ½
- Explaining, how this law is a consequence of law of conservation of energy ½

(ii)

(I) Direction of induced current when loop enters and loop leaves ½+½(II) Plots showing variation of magnetic flux ( $\phi$ ) with time (t),  
induced emf (E) with time (t) and  
relevant values E, ( $\phi$ ) and t on the graph 1  
1  
1

Lenz's law – Polarity of the induced emf is such that it tends to produce a current, which opposes the change in magnetic flux that produces it.

When magnet is moved closer/ away from the loop, same/ opposite pole is developed on the approaching face of the loop. So mechanical work is required to move a magnet which gets converted into electrical energy which is consistent with the law of conservation of energy.

(i)

Difference between Peak value and rms value of ac  
Relation

1

½

(ii) (I) Identification of elements X and Y by phasor diagram

1

(II) Obtaining

- Resonance condition
- Expression for resonant frequency
- Impedance value

1

1

½

(i)

Peak value - It is the maximum value of Alternating current.

1

rms value - It is the equivalent dc current that would produce the same average power loss as alternating current.

**Alternatively-**

Peak value - It is the maximum value of Alternating current.

rms value- It is the effective value of an ac representing the equivalent dc, that would produce the same heating effect in same resistor in same time period.

Relation  $I_{\text{rms}} = \frac{I_0}{\sqrt{2}}$

½

(ii) (I) X- Inductor (L)

\frac{1}{2}

Y- Capacitor (C)

\frac{1}{2}

(II) Impedance of the circuit

$$Z = (X_L - X_C)$$

\frac{1}{2}

At resonance  $Z = 0$

$$X_L = X_C$$

\frac{1}{2}

$$\omega L = \frac{1}{\omega C}$$

\frac{1}{2}

$$\omega^2 = \frac{1}{LC}, \quad \omega = \frac{1}{\sqrt{LC}}$$

\frac{1}{2}

$$v = \frac{1}{2\pi\sqrt{LC}}$$

Impedance at resonance

$$Z=0$$

\frac{1}{2}
